One of the masterpiece from Chronoswiss is Delphis. The watch consists of three different display systems. The watch's minute hand goes back to the starting point of the semicircular arc after it reaches the endpoint.

Kairos Automatique is the most stunning watch from Chronoswiss. This watch has been regarded as the perfect watch by many. It comes in different case sizes (three in total). There is the classical Kairos whose diameter is 38mm. The Kairos Medium diameter is 34mm and the last one is the Kairos Lady whose diameter is 30mm.

This watch got its name from a Greek word "Kairos". This word was actually used by ancient Greek people to explain a significant moment which should be held. There are sixty diamonds in the Kairos collection. There is one diamond each for every minute (of every hour). So it is definitely loved more by women!

One of the oldest watches from Chronoswiss is The Klassik Chronograph. It was manufactured in the 1940s and 50s. Its horns are shaped like a teardrop. It has rectangular shaped push pieces. Its dial has hour indices and its hands are uniquely shaped.

Yet another classy watch from Chronoswiss is Opus. Its back case is transparent which allows the user to watch the winding and switching processes. Orea from Chronoswiss has an enamel dial. Orea means "the beautiful one". Rattrapante and Pathos are other significant watches from Chronoswiss.{mosgoogle left}
